**Test Comments:** *As usual this was a nice uniform location. Emergence was good and corn was all nice and even at V5-V6 stage. Mother nature gave this area plenty of moisture all season long, at times, maybe a bit too much. Plants stood well at harvest, and there was not much disease noted. Some ears showed signs that something stressed them at pollination, because some kernel rows were pinched a little.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
