TEST COMMENTS: *Wet spring weather earlier in May delayed soybean planting in this area. Once planted, emergence was quick and stands were nice and uniform across this site. Rainfall was excessive throughout the season, but fell in a steady pattern as the season wore on. Total accumulation May through end of Sept was 33.8", which is 12.8" over the 30-yr average. Very little disease or pest pressure observed.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
