TEST COMMENTS: Location was planted the first week of May and emerged very well. Rainfall was good through June but was dry in July and August. Plants showed little evidence of disease at harvest. Over half the varieties had green stems making harvest slow. Plants were medium height, with above average seed size. According to our plot host, R & D farms, most area fields are averaging in the mid 70's bu/ac.

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
