**Test Comments:** *Wet and cooler than normal weather after planting challenged plant establishment. Overall, stands were just below 90% of seeded rate. Despite being well drained, plant health was challenged by rain; 7.2" in May, 10.4" in June, 2.6" in July, 5.5" in Aug, and 9.5" in Sept. Nearly 16" above the 30-yr average. Stalk quality varied noticeably among hybrids. Northern corn leaf blight was also observed.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
