### TEST COMMENTS:

We got this site planted mid-May due to cold and wet weather that delayed planting season across several counties in northern Iowa. The heat units never really caught up through the remainder of the growing season which caused some concern that corn wouldn't black layer before a hard freeze. Thankfully, the frost held off and all maturities did black layer before damage occurred. Some green snap was observed in the plots and appeared to be hybrid specific. Yield trends for this season at this site generally favored earlier hybrids.
