TEST COMMENTS:

Soil temperatures were a concern during the first week of May after a few small showers and cold weather passed through the northern parts of Iowa. Once warmth arrived, soil conditions improved and planters were rolling hard as soil temps were trending upward. We used a drone this season for the first time which revealed excellent plant stands and early-season crop vigor. This part of the state escaped the drought conditions that impacted most of Iowa. Rainfall patterns were very favorable for the crop. With fungicide and insecticide applications, plants were healthy through maturity. There was some evidence of stalk deterioration at harvest which was recorded in lodging scores.
