### TEST COMMENTS:

Planted May 10th in almost perfect conditions and emerged nice and uniform. The rest of May and June were fairly dry, helping the corn root down deeper. Around the 4th of July, the area started getting rain. Plants were still nice and healthy at the time of harvest. There were small amounts of Tar Spot in the plot, but too late to affect yield. The full-season hybrids were still holding a lot of moisture. We are seeing a lot of this in the area.
