TEST COMMENTS:

This corn-on-corn site started very similar to 2022 for the first part of the season through tassel, but with slightly better moisture at planting. Then it dried up like much of the rest of northern Iowa. The 2" of rain on June 25 was well received. It came with a little wind but the plots stood up fine. Overall seasonal rainfall was nearly 12 inches below the 10-yr average and yields suffered due to the drought stress in this area, especially on the light soils that don't hold water well. Another significant issue facing these hybrids was heavy rootworm pressure, which caused many hybrids to lodge...some severely.
