### TEST COMMENTS:

*This location was planted in ideal soil conditions and had favorable weather following. Excellent emergence with great stand across the plot. May 7th brought 0.6" of rain, then hardly saw a tenth until the first of July. Cooler temperatures at night and some overcast days throughout the growing season kept from causing too much stress on the plants. Smoke and haze from the wildfires in Canada may have helped this area Al says. Good crop management helped with any late-season yield-robbing disease as almost nothing was present. Over 70% of the hybrids were still showing green on the foliage and were very healthy at the time of harvest. With great standability, stalk quality, and ear development this location showed its potential despite some challenges during the growing season!*
